🔍 Abstract: The plant-growing method includes the following steps: one kind of ropy plant nutritive liquid with water; fertilizer and high-hydroscopicity resin as main components is first sprayed to sandy soil or dry land after seeding, and its nutritive liquid permeate to soil for plant to grow, and another kind of emulsion capable of fixing sand and inhibiting water evaporation is then sprayed and can forma layer of organic compound film on the surface of soil. The present invention can maintain water, maintain fertilizer and fix sand simultaneously and can be used in planting plant in desert and other dry area.
